

YORK® Chiller Access Manager

Provides secure access to YORK chiller control panels

The Chiller Access Manager allows you to:

Control: Manage who has access to your equipment

Record: Trace interactions with your equipment

Protect: Secure your valuable equipment and critical operations

The Chiller Access Manager offers enhanced protection of a critical facility asset – your chiller

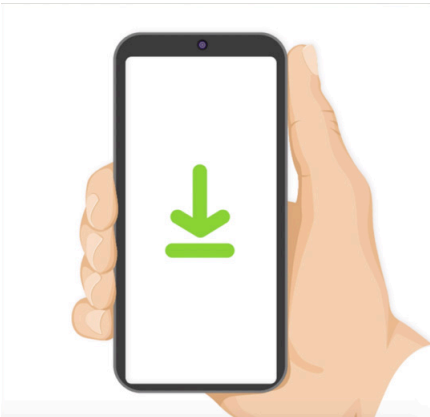

YORK® Chiller Access Manager is a feature that provides secure access to YORK chiller control panels. Users download the YORK Chiller Access Manager app, create an account and then use the app to generate dynamic access codes.

In addition to the mobile app, a web platform allows chiller owners to manage chiller access further. For example, you can view chiller activity, such as which users have had access to the unit and when.

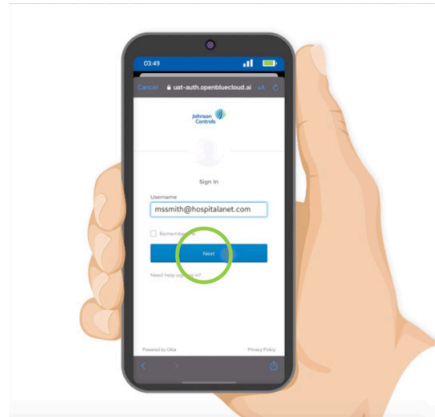

This feature provides owners with control and visibility over who is operating, maintaining and servicing their chiller – ensuring the protection of an asset critical to facility operation.

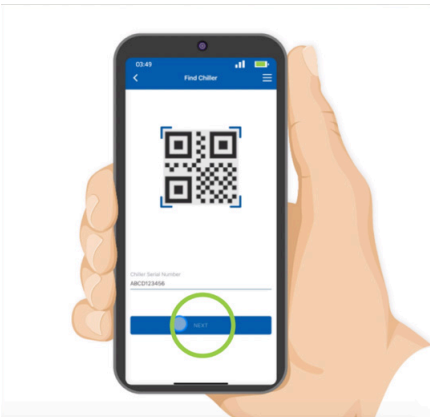

To utilize YORK Chiller Access Manager, simply:

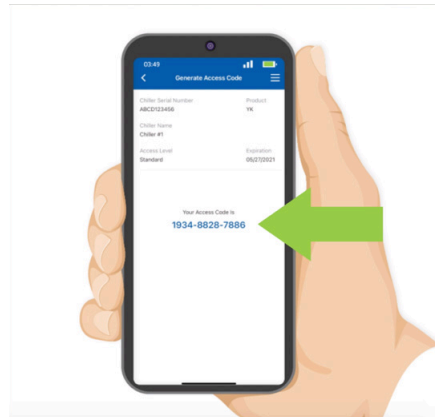

1. Download the YORK Chiller Access Manager app via iOS or Android

2. Register and create an account

3. Enter chiller information in the app to generate a dynamic access code

4. Utilize the access codes to log in and operate the chiller control panel

Contact your YORK chiller representative to learn more about the YORK Chiller Access Manager or visit www.york.com/chilleraccess.
